@ M. 1 1 1 1 1 2002

- 1. a). Explain what an **Information Problem** is (refer to IT@WORK, Page 149):
- b). List four causes of Information Problems (refer to Activity 4.4 in IT@WORK, Page 152):
- 2. Explain the differences between using a **Trial and Error**, **Top down** or **Bottom Up** approach to solving a problem (refer to IT@WORK, Page 153-154):
- 3. Select from the 2<sup>nd</sup> and 3<sup>rd</sup> column a suitable Aim and set of Characteristics that matches the Step in solving a problem (refer to IT@WORK, Page 156-167):

| Step in solving a problem        | Aim  | Characteristics of step  |
|----------------------------------|--|--|
| 1). Formulating the Problem      | A). Measure if the solution meets the user's needs       | (i). Construct the solution using the most effective selection of hardware, software etc   |
| 2). Analysing the Problem        | B). Make the solution ready for use                      | (ii). Research alternative hardware, software and procedures to be used using a detailed design  |
| 3). Designing the Solution       | C). Write user documentation to assist users             | (iii). Determine the input, required output and any constraints of the solution  |
| 4). Developing the Solution      | D). Test the solution produces the required results      | (iv). Examine current practices and identify all symptoms and causes of the problem  |
| 5). Testing the Solution         | E). Transform the design into a solution                 | (v). Surveying & Interviewing users to determine the effectiveness of the solution to meet the user's needs  |
| 6). Producing User Documentation | F). Work and record the plan for developing the solution | (vi). Clearing out test data, setting up the required files, making files secure by controlling access   |
| 7). Implementing the Solution    | G). Understand the problem                               | (vii). Produce User Documentation that explains the procedures for using the hardware & software, inputting data, validating and manipulating data, storing and retrieving files and producing the required output and fixing minor problems |
| 8). Evaluating the Solution      | H). Determine what the problem is                        | (viii). Conduct Formal and Informal Testing to test all aspects of the solution including data entry, validation and formats and output for relevance, errors, completeness, accuracy and timeliness   |

**Defining a Problem:** 

**Solving the Problem:** 

1. =  $\underline{H}$  =  $\underline{\text{(iv)}}$ . 2. =  $\underline{\hspace{1cm}}$  =  $\underline{\hspace{1cm}}$ .

3. = \_\_\_\_ = \_\_\_ . 4. = \_\_\_ = \_\_\_ . 5. = \_\_\_ = \_\_\_ .

**Using the Solution:** 

**Evaluation:** 

6. = \_\_\_\_ = \_\_\_. 7. = \_\_\_\_ = \_\_\_.

8. = \_\_\_\_\_ = \_\_\_\_.

4. Summarise each of the four stages in Project Management (refer to IT@WORK, Page 167-173):

Defining the project:

Designing the project:

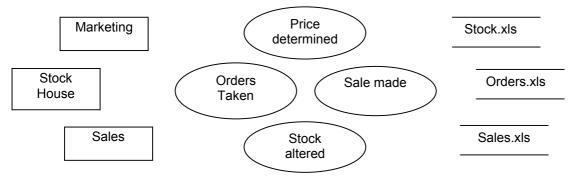

**Executing the project:** 

**Terminating the project:** 

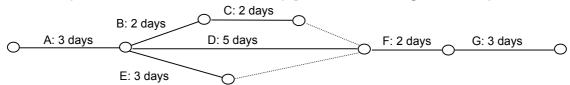

5. Determine the duration of a **Milestone** shown in the **Gantt Chart** on Page 171 of IT@WORK.

| <u>IT 3/4</u>              | Due:   | PROJECT MANAGEMENT 14B   | Name:                                |
|----------------------------|--|--|--------------------------------------|
| 1. a). Exp<br>385):        | plain the difference be  | etween the <b>Waterfall</b> and the <b>Phased Developn</b>                                       | nent model (refer to IT@WORK, Page   |
|                            | de two reasons why b<br>(refer to IT@WORK                      | ouilding a <b>Prototype</b> of the new system is more at X, Page 385):  (ii).                    | advantageous than the Waterfall      |
|                            |  | op left side of Page 386 to identify the six major ne bullets but one stage is explained twice): | steps in Project Management (hint:   |
| a).                        |  | b).  | c).                                  |
| d).                        |  | e).  | f).                                  |
| 386-39                     | e three characteristic<br>94 and 169-173):<br>ing the project: | s for each of the following stages in project man  | agement (refer to IT@WORK, Page      |
| (i).                       | ing the project.   | (ii).  | (iii).                               |
| b). <b>Prelir</b> (i).     | ninary Investigation   | <b>1:</b> (ii).  | (iii).                               |
| c). Devel<br>(i).          | oping a broad plan:  | (ii).  | (iii).                               |
| d). Execu<br>(i).          | ating each stage:  | (ii).  | (iii).                               |
| e). Revie<br>(i).          | wing the project:  | (ii).  | (iii).                               |
| f). <b>Term</b> i(i).      | nating the project:  | (ii).  | (iii).                               |
| 4. Define a). <b>Deper</b> | _  | (refer to IT@WORK, Page 390-392):<br>b). <b>Lag Time:</b>  |                                      |
| c). Lead                   | Times:   | d). Float-time:  |                                      |
| e). Critic                 | al Path:   |  |                                      |
| 5. Refer tal. A <b>Du</b>  |  | chart on page 392 in IT@WORK to identify the b). A <b>Node:</b>                                  | symbols used to signify:             |
| c). A Tas                  | k:   |  |                                      |
| 6. Identif<br>Page 3       |  | g Computer-Aided Software Engineering (CA  | ASE) software (refer to IT@WORK,     |
| 7. Identif                 |  | following <b>Data Flow Diagram</b> symbols (refer to c).   | o IT@WORK, Page 396 & 397):  d).  —— |

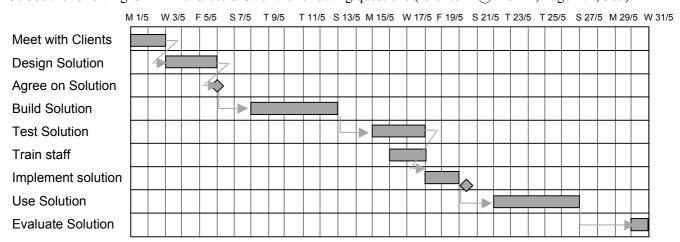

- 1. In the following Data Flow Diagram (DFD) (refer to IT@WORK, Page 396 & 397):
- a). List the actual:
- (i). Files to store data.
- (ii). Departments using the data.
- (iii). the Processes involved.
- b). Use Arrows to connect the related Departments, Files and Processes and where relevant include the events that occur on each arrow. Hint: Make connections between all related shapes & some may have multiple connections:

2. Use the following PERT chart to answer the following question (refer to IT@WORK, Page 390-392):

- a). List the stages that make up the Critical Path and shade the Critical Path on the above diagram.
- b). What is the minimum number of days required to complete the project (using the Critical Path)?
- c). If task E was delayed by 1 day, what effect would this have on the Critical Path and the project duration?
- d). If the project started on a Monday and the organization is not open on the weekend, at the end of which day would the project be completed if there were no delays?
- 3. Use the following GANTT chart to answer the following questions (refer to IT@WORK, Page 171, 389):

- a). What was the overall duration (in weeks & days) of the project?
- b). Identify a milestone that occurred during the project.
- c). What task is not a Predecessor of any other task?
- d). Which task provides "Lead Time" for the next task (excluding the weekend)?
- e). If the implementation takes 1 day longer, what effect will this have on the project's expected end-date?
- f). If the project had to be completed three days earlier, explain which tasks could be shortened and why.

| <u>IT 3/4</u> Due:  | ORGANISATIONS 15 Name:  |  |  |  |
|---|---|--|--|--|
| 1. Link each of the following IT@WORK, Page 27-32):   | types of companies with their definition by writing in the letter code (refer to  |  |  |  |
| Type of Organisation  | Description   |  |  |  |
| A). Profit-based  | (i). Businesses with no more than 50 shareholders but can't sell shares to the public                                     |  |  |  |
| B). Not For Profit  | (ii). Businesses listed on the share market that can sell shares to the public  |  |  |  |
| C). Government owned  | (iii). Company that has limited liability owned by members for mutual benefits  |  |  |  |
| D). Non Government  | (iv). Companies with two or more people who pool their resources  |  |  |  |
| E). Sole Proprietors  | (v). Single owned business with or without employees  |  |  |  |
| F). Partnership   | (vi). Non profit organizations that employ paid volunteers – Salvation Army   |  |  |  |
| G). Proprietary Company   | (vii). Organisations owned by the government – Telstra, Human Services  |  |  |  |
| H). Public Companies  | (viii). Organisations that assist the community not for profit – schools, police  |  |  |  |
| I). Cooperatives  | (ix). Businesses whose purpose is to make large profits   |  |  |  |
|   | e D). = E). = F). = G). = H). = I). =  of Organisations and provide one example of their function (refer to IT@WORK, Page |  |  |  |
| a).   | Example:  |  |  |  |
| b).   | Example:  |  |  |  |
| c).   | Example:  |  |  |  |
| d).   | Example:  |  |  |  |
| e). Example:  |   |  |  |  |
| 3. List three functions of <b>Org</b>   | ganisational Goals (refer to IT@WORK, Page 34).   |  |  |  |
| <ul><li>4. Provide explanations for the seven types of Goals (refer to IT@WORK, Page 34-36):</li><li>(i). Profit: (ii). Growth:</li></ul>   |   |  |  |  |
| (iii). Survival:  | ii). Survival: (iv). Effectiveness:   |  |  |  |
| (v). Efficiency:  | (vi). Competitiveness Edge:   |  |  |  |
| (vii). Social Responsibility:   |   |  |  |  |
| 5. a). Explain the difference between a <b>Goal</b> , an <b>Objective</b> , a <b>Policy</b> and a <b>Mission Statement</b> (refer to IT@WORK, Page 34-38):  |   |  |  |  |
| b). Identify the Goal, Objective, Policy and Mission Statement in the following scenario: Tryit Co is a small business that prides themselves in providing high quality Toys at cheap prices. They wish to increase their market share of plastic toys by introducing new toys from overseas markets at low prices. They will not be beaten on prices and will provide lifetime guarantees on all toys. |   |  |  |  |
| Mission Statement:  | Goal:   |  |  |  |
| Policy:   | Objective:  |  |  |  |

1. Link each of the following Network terms with their definition (refer to IT@WORK, Page 248-259):

| Item                           | Description  |  |  |
|--------------------------------|--|--|--|
| A). Local Area Network (LAN)   | (i). Number of channels available for the transfer of data                 |  |  |
| B). Wide Area Network (WAN)    | (ii). Protocol to transfer data to PC with token using twisted pair cable  |  |  |
| C). Gateway                    | (iii). Card to connect a computer to the network using a network cable     |  |  |
| D). Bridge                     | (iv). Protocol for the transfer of data on a network                       |  |  |
| E). Nodes                      | (v). Protocol for the transfer of data on the Internet/Intranet & networks |  |  |
| F). Intranet                   | (vi). High speed modem that controls the transfer of data on a network     |  |  |
| G). Extranet                   | (vii). Network with no file server where workstations share their files    |  |  |
|                                | with each other  |  |  |
| H). Peer-to-Peer Network (P2P) | (viii). Intranet open to external sources for limited access               |  |  |
| I). Router                     | (ix). Internal web-based network   |  |  |
| J). Transmission Control       | (x). Hardware devices on the network                                       |  |  |
| Protocol/Internet Protocol     |  |  |  |
| (TCP/IP)                       |  |  |  |
| K). Ethernet                   | (xi). Combination of hardware and software to convert protocols of         |  |  |
|                                | different networks   |  |  |
| L). Network Interface Card     | (xii). Device with a processor to convert protocol signals from one type   |  |  |
|                                | of network so it can be used by another type of network                    |  |  |
| M). Token Ring (IBM)           | (xiii). Interconnected group of computers connected over very large        |  |  |
|                                | distances usually by microwave, fibre-optic or satellite connections       |  |  |
| N). Bandwidth                  | (xiv). Interconnected group of computers within a small area (business)    |  |  |

| <b>A</b> ). | = | _     |
|-------------|---|-------|
| raj.        |   | <br>• |
|             |   |       |

2. Explain the difference between a Cable and Wireless network system (refer to IT@WORK, Page 251):

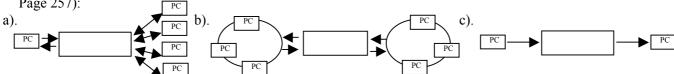

- 3. List the transmission speed of each of the following Transmission Cables (refer to IT@WORK, Page 252):
- a). Twisted Pair (many wires twisted in pairs):
- b). Coaxial Cable (single core wire insulated from one other wire):
- c). Fibre-Optic (glass fibres):
- 4. Identify three wireless transmission media (refer to IT@WORK, Page 252-253):
- a).

- c).
- 5. Draw pictures to illustrate the arrangement of the PCs, File Server (if required) and any peripherals (printer/scanner) on each of the following network Topologies (refer to IT@WORK, Page 255-256):
- a). Bus Network:

b). Star Network:

c). Ring Network:

6. Use the following Network Architecture diagrams to identify a **Switch**, **Hub** and a **Router** (refer to IT@WORK, Page 257):

1. Explain the difference between **Personal Information** and **Health Information** (refer to IT@WORK, Page 310):

2. Complete the following table by providing information about each of the following Acts (refer to IT@WORK, Page 309-318):

| Name of Act  | Jurisdiction  | Type of Info   | Key Provisions             |
|--|---|--|----------------------------|
| Privacy Amendment (Private Sector) Act 2000            | Commonwealth (private businesses)                       | Personal & Health information  | 1.<br>2.<br>3.             |
| Privacy Act<br>1988                                    | Commonwealth<br>(federal and<br>ACT – public<br>sector) | Personal information   | 1.<br>2.<br>3.             |
| Information<br>Privacy Act<br>2000                     | State (Victorian public sector)                         | Personal information (not health) held by the public sector  | 1.<br>2.<br>3.             |
| Health Records<br>Act 2001                             | State (Victorian public & private health service)       | Health<br>information  | 1.<br>2.                   |
| Copyright<br>Amendment<br>(Digital Agenda)<br>Act 2000 | Commonwealth  | Art, Literature,<br>Music, TV/Sound<br>broadcasts, Drama<br>works, Films and<br>Computer<br>programs | 1.<br>2.<br>3.<br>4.<br>5. |

3. Link the following National Privacy Principles to their definitions (refer to IT@WORK, Page 312):

| Item  | Description   |  |  |  |
|---|---|--|--|--|
| A). Collection - Acquire                                | (i). Individuals must consent for organizations to use their data unless laws require its acquisition   |  |  |  |
| B). Use & Disclosure – Manipulate/Communicate           | (ii). Data can be transferred to foreign countries by owners consent  |  |  |  |
| C). <b>Data Quality</b> – Validate                      | (iii). Individuals do not have to identify themselves when providing data   |  |  |  |
| D). <b>Data Security</b> – Store,                       | (iv). Records of individuals should not be identified by their name/number  |  |  |  |
| Retrieve, Dispose                                       | assigned from another organisation  |  |  |  |
| E). <b>Openness</b> – Communicate                       | (v). Individuals can request access to their personal information to check it   |  |  |  |
| F). Access & Correction – Acquire, Manipulate, Retrieve | (vi). Organisations must inform individuals on how organizations will manage their data   |  |  |  |
| G). <b>Identifiers</b> – Storage,<br>Retrieval          | (vii). Organisations must take steps to protect all stored and disposed data  |  |  |  |
| H). Anonymity - Acquire                                 | (viii). Organisations must try to ensure all data collected/store is accurate, complete and up-to-date  |  |  |  |
| I). <b>Transborder Data</b> – Communicate               | (ix). Personal information must not be used for a secondary purpose and individuals must be given chance to opt out of receiving further material |  |  |  |
| J). Sensitive Info - Acquire                            | (x). Information collected must be for the stated purpose & collected fairly & lawfully   |  |  |  |
